Professional Summary

Computer Science student with strong fundamentals in Python, SQL, and Django. Experienced in developing web applications and integrating machine learning models for real-time predictions. Passionate about problem-solving, data-driven solutions, and building scalable applications.

Education

Bachelor of Technology (B.Tech) – Computer Science Engineering

2022 – 2026

Sri Venkatesa Perumal College of Engineering and Technology, Tirupati

CGPA: 8.4 / 10.0

Technical Skills

- **Programming Languages:** Python, SQL
- **Web Technologies:** HTML5, CSS3, Bootstrap (Responsive Design)
- **Frameworks:** Django (MVC, REST APIs, RBAC)
- **Databases:** MySQL / MariaDB
- **Software Engineering:** OOP, SDLC Models, REST API Design, Version Control (Git / GitHub)
- **Core CS Concepts:** Data Structures, Algorithms, Computer Networks, Operating Systems
- **Languages:** English, Telugu, Tamil, Hindi

Projects

Used Car Price Prediction System | *Python, Django, ML (ANN, Linear Regression), MySQL, HTML/CSS* | [GitHub](#)

- Built an end-to-end machine learning system predicting used car prices from inputs such as brand, model, year, fuel type, and mileage.
- Trained and evaluated multiple models (Linear Regression, ANN) using MAE and RMSE benchmarks, applying rigorous software engineering discipline to model selection and production readiness.
- Integrated the ML model into a Django REST backend enabling real-time predictions; designed a MySQL schema for storing inputs and results, ensuring scalability and data traceability.
- Implemented data preprocessing and feature selection pipelines, improving prediction accuracy and demonstrating proficiency in structured data handling.

Employee Management System | *Python, Django, MySQL, Bootstrap* | [GitHub](#)

- Developed a full-featured Django MVC web application for employee record management with complete CRUD operations across roles and departments — reflective of enterprise-grade business application development.
- Implemented secure authentication and role-based access control (RBAC) at the framework level, ensuring sensitive organisational data was protected.
- Designed a normalised MySQL database schema and optimised queries for efficient data retrieval; built a responsive Bootstrap UI reducing data-entry errors and improving usability across device types.

Certifications & Achievements

- **Python Development Training Program – SkillRaace (Dec 2025 – Mar 2026):** Completed a structured 3-month programme covering Python, OOP, problem-solving, and project development under professional mentorship.
- **SQL and Relational Databases 101 – IBM Skills Network (2026):** Learned SQL fundamentals, relational database concepts, and data querying techniques. Worked with CRUD operations, joins, filtering, sorting, and database management using structured data systems.
- **Tata Group Data Analytics Simulation – Forage (2026):** Performed exploratory data analysis on real business datasets and proposed AI-driven predictive solutions, strengthening data analytics and communication skills.
- **Python for Beginners to Advanced – Udemy (2024):** Self-initiated learning programme reinforcing Python programming fundamentals and algorithmic problem-solving.
- **Internshala Student Partner (ISP):** Led campus outreach and student engagement initiatives, demonstrating leadership, communication, and team coordination in a structured programme.
